

# Information Visualization

Paolo Buono – Information Visualization – 23 marzo 2012

## USAGE AGREEMENT

BY USING THESE SLIDES OR PARTS OF THEM YOU INDICATE YOUR ACCEPTANCE OF THE FOLLOWING AGREEMENT, UNDERSTAND THE CONDITIONS, AND AGREE TO BE LEGALLY BOUND BY THEM.

I understand that the slides contain copyright protected material and therefore the following conditions of use apply:

- The slides may only be shared as PDF files instead of the original PowerPoint files
- The access to the slides must be securely restricted to the **attending students** (e.g., using password authentication)
- The students cannot share or redistribute the slides

Paolo Buono – Information Visualization – 23 marzo 2012

## Definition

Visualization is:

- Use of
- computer-supported
- interactive
- visual representation of data
- to amplify cognition

*Shneiderman, 2004*

Paolo Buono – Information Visualization – 23 marzo 2012

## Definition

**Information** visualization is:

- Use of
- computer-supported
- interactive
- visual representation of **abstract data**
- to amplify cognition

*Shneiderman, 2004*

Paolo Buono – Information Visualization – 23 marzo 2012

## Information Visualization

- Use of computer-supported interactive visual representation of abstract data to amplify cognition
- Compact graphical presentation
  - manipulating large numbers of items
  - possibly extracted from far large datasets
- Enables users to make discoveries, decisions, or explanations
- About patterns, groups of items, individual items

Paolo Buono – Information Visualization – 23 marzo 2012

## Tufte about graphical excellence

- Excellence consists of complex ideas communicated with clarity, precision, efficiency. Graphical display should:
  - Show the data
  - Induce the viewer to think about the substance rather than about methodology, graphic design, the technology of graphic production, ...
  - Avoid distorting what the data have to say
  - Present many numbers in a small space
  - Make large data sets coherent
  - Encourage the eye to compare different pieces of data
  - Reveal the data at several levels of detail
  - Serve a reasonably clear purpose: description, exploration, tabulation, decoration
  - Be closely integrated with the statistical and verbal descriptions of a data set

E. R. Tufte, *the Visual Display of Quantitative Information*, Graphics Press, Cheshire, Connecticut, 1983

Paolo Buono – Information Visualization – 23 marzo 2012

## More definitions

- “a process of transforming data and information that are not inherently spatial into a visual form, allowing the user to observe and understand the information...”  
*Gershon & Eick, 1995*
- “the communication of abstract data through the use of interactive visual interfaces”  
*Keim et al., 2006*
- “a process of forming a mental model of data, thereby gaining insight into and understanding of that data”  
*Spence, 2007*
- “produces (interactive) visual representations of abstract data to reinforce human cognition; thus enabling the viewer to gain knowledge about the internal structure of the data and causal relationships in it”  
*InfoVis Wiki (<http://www.infovis-wiki.net>)*

InfoVis Wiki (<http://www.infovis-wiki.net>)

Paolo Buono – Information Visualization – 23 marzo 2012

## What is Information Visualization

- Visualization is more than method of computing. It is a process of transforming information into a visual form enabling the user to observe the information
- We need to take into account human perceptual and cognitive capabilities, human variations, and task characteristics
- Visualization is more than pretty pictures. Successful visualizations can reduce the time it takes to get information, make sense out of it, and enhance creative thinking
- Information is usually non-spatial data or abstract
- Finding a good spatial representation of the information at hand is one of the most difficult tasks

Paolo Buono – Information Visualization – 23 marzo 2012

## Information Visualization vs Scientific Visualization

- Scientific visualization is: “The graphical representation of complex physical phenomena in order to assist scientific investigation and to make inferences that **aren't apparent in numerical form**. Typical examples include processing of satellite photographs and 3D representations of molecules and fluids to examine their dynamics”  
*Usability first, 2003*
- Scientific Visualization (SV) is focused on visually representing physical objects and phenomena
- Information Visualization (IV) focuses on more abstract data
- IV tackles applications that deal with data (e.g., Web site accesses) which are outside the scope of SV

Paolo Buono – Information Visualization – 23 marzo 2012

## Visualization in everyday life

- Table in a newspaper
- Train/subway map with arrival/departure times
- Map of a region
- Weather chart
- Stock market graph
- Your product vs leading brand comparison plot
- 3D reconstruction of a body part generated from a CT scan
- Instruction manual
- Highway signs

Paolo Buono – Information Visualization – 23 marzo 2012

## Domains

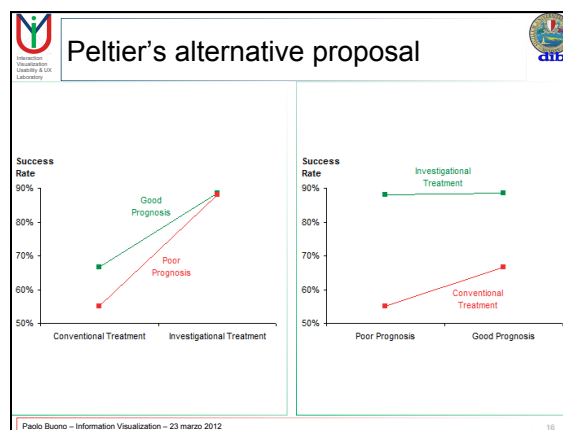

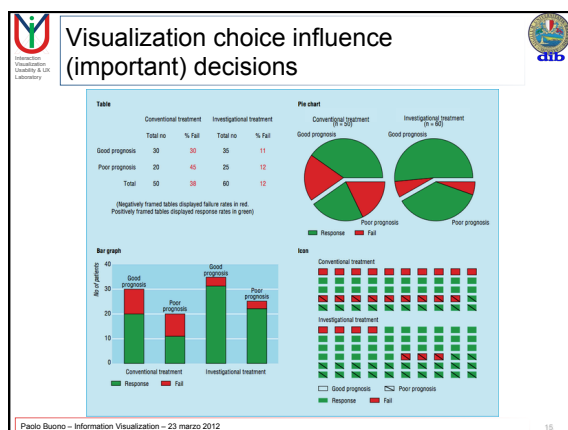

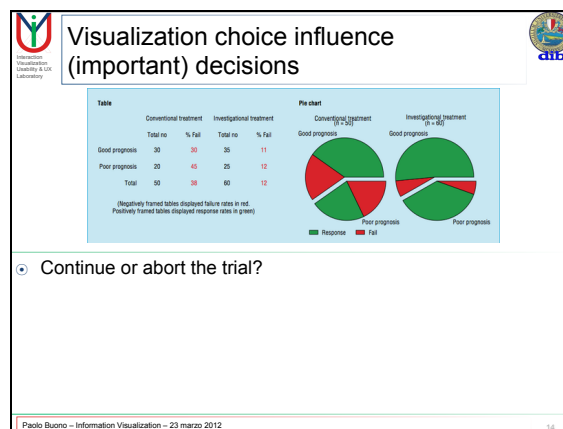

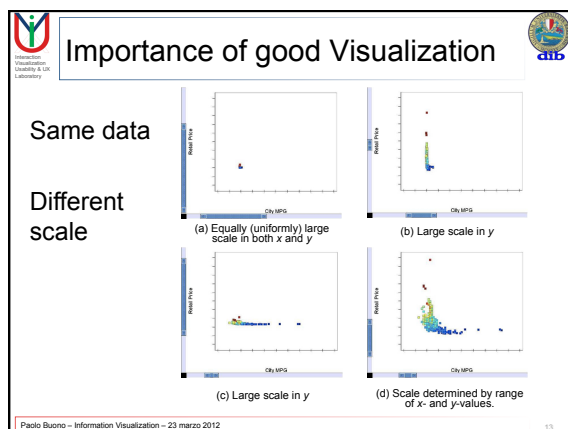

- Finance
- Engineering
- Medicine
- Physics
- Statistics
- Data analysis
- Simulation
- Marketing / advertisement
- ...

Paolo Buono – Information Visualization – 23 marzo 2012

## Importance of Visualization

- Billions of potential users
- Huge amounts of existing information
  - Information overload
  - Difficult to make sense
- New visual computing, display technologies, and visualization methods make it possible to represent information effectively

Paolo Buono – Information Visualization – 23 marzo 2012

### Early Visualizations

One of the 12 pages of the Peutinger Map set, showing the roads of the Roman Empire

Paolo Buono – Information Visualization – 23 marzo 2012

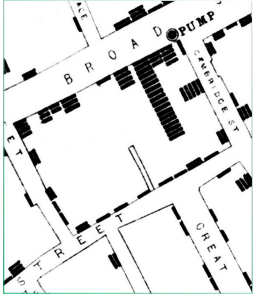

### Early Visualizations

- The famous Hereford map, the largest surviving map of the Middle Ages (1280s)

Paolo Buono – Information Visualization – 23 marzo 2012

### Early Visualizations

- A section of John Snow's map of the deaths from cholera in London in 1854
- Each bar within the houses represents one deceased individual

Paolo Buono – Information Visualization – 23 marzo 2012

### Early Visualizations

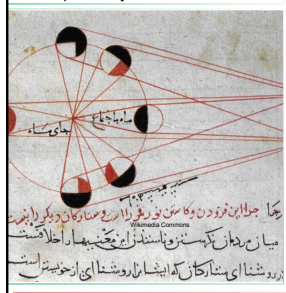

- Overview map of the deaths from Cholera in London in 1854
- Note the concentration around the Broad Street Water Pump
- Note as well the outliers

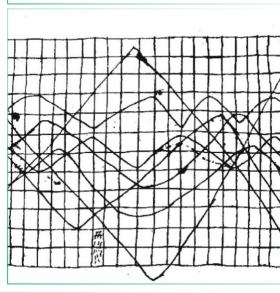

Paolo Buono – Information Visualization – 23 marzo 2012

### Early Visualizations (Biruni circa 1030)

Shows planetary motion

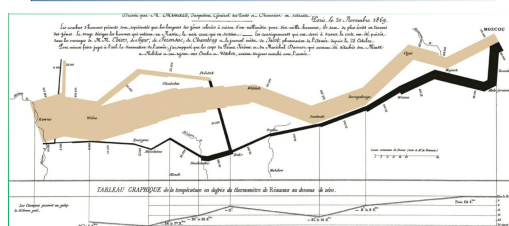

Phases of the moon in orbit

Paolo Buono – Information Visualization – 23 marzo 2012

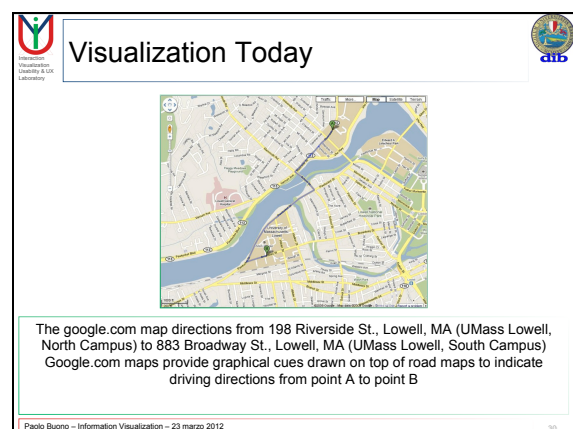

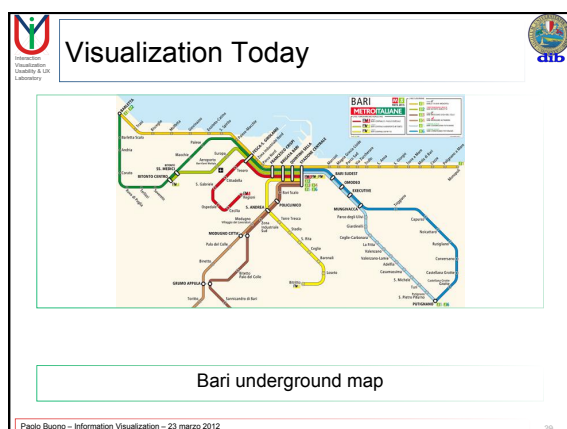

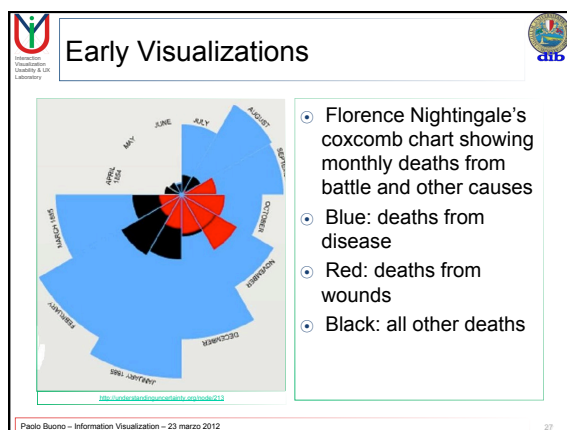

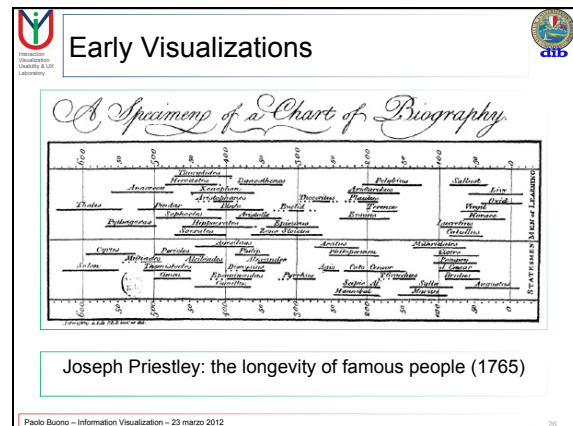

### Early Visualizations: Minard's map

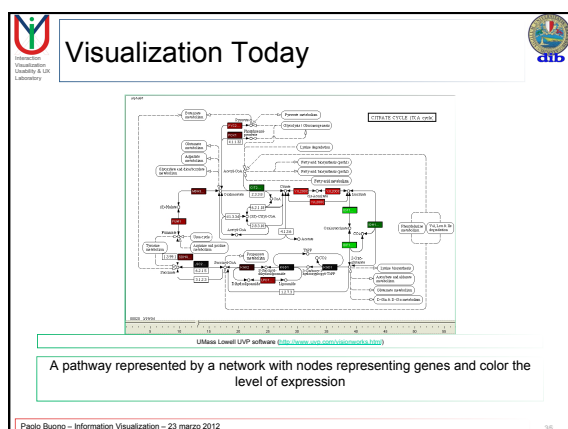

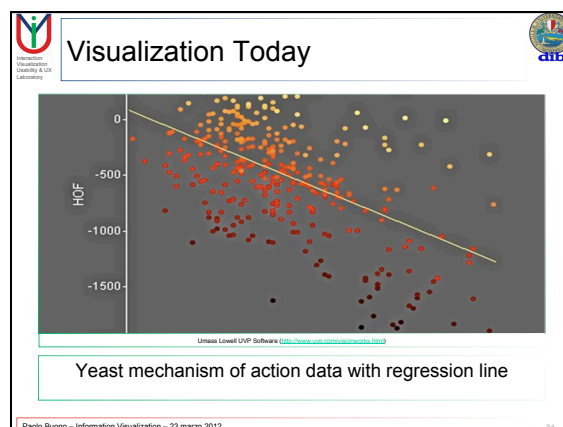

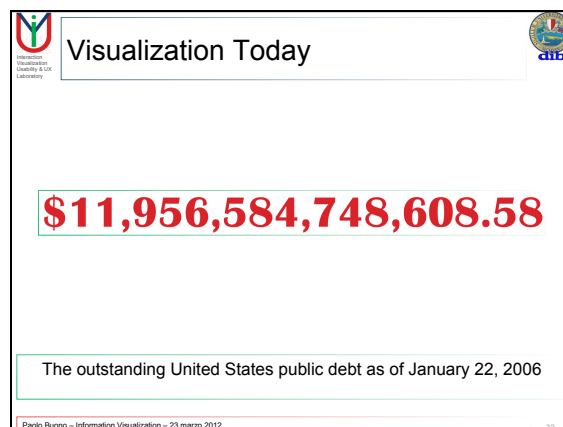

Width: size of the army at that location  
Color: direction of movement  
Temperature: along the retreat at the bottom

Paolo Buono – Information Visualization – 23 marzo 2012

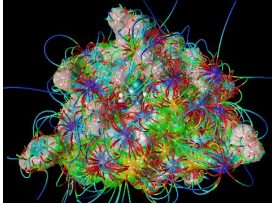

- ### Visualization vs Computer Graphics
- Originally considered a subfield of CG
  - Visualization are always connected to data, do not emphasize visual realism
  - CG focuses on graphical objects and organization of graphical primitives. A secondary application of CG is in art and entertainment
- Paolo Buono – Information Visualization – 23 marzo 2012

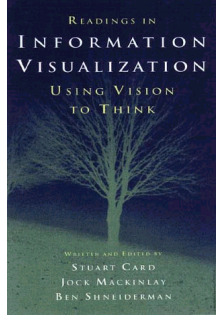

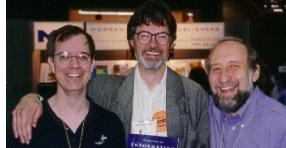

### Scientific Data Visualization vs Information Visualization

- Still in early 2000 SciVis and InfoVis were differentiated
- Both provide representations of data
- Dataset are often different

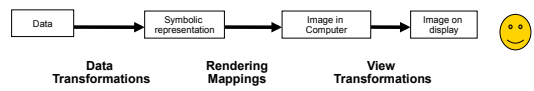

Paolo Buono - Information Visualization - 23 marzo 2012

### Information Visualization: Using Vision to Think

Paolo Buono - Information Visualization - 23 marzo 2012

### Visualization process

Paolo Buono - Information Visualization - 23 marzo 2012

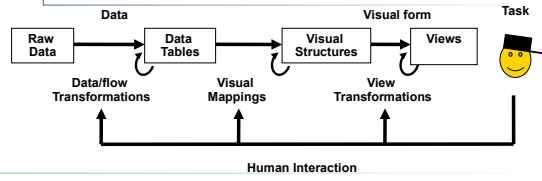

### Graphics pipeline

- Modeling (poligons)
- Viewing (cameras)
- Clipping (bounds)
- Hiddens surface removal
- Projections (onto the two-dimensional plane)
- Rendering

Paolo Buono - Information Visualization - 23 marzo 2012

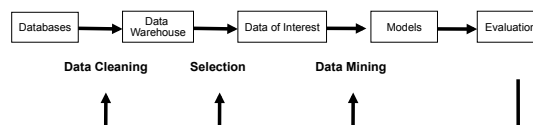

### Visualization pipeline

- Data modeling
- Data selection
- Data to visual mappings
- Scene parameter settings (view transformations)

Paolo Buono - Information Visualization - 23 marzo 2012

### Knowledge Discovery Pipeline

Paolo Buono - Information Visualization - 23 marzo 2012

## The role of the User

Can be involved in most stages of visualization pipeline

- Exploration
- Confirmation
- Presentation (primary)

Paolo Buono - Information Visualization - 23 marzo 2012

## Exploratory visualization

- microarray gene expression experiment analysis

J. Zhou, G. Grinstein, and K. Wang: "A New Gene Selection Method for Visual Analysis", Scientific Report No. 015, University of Massachusetts Lowell, 2007

Paolo Buono - Information Visualization - 23 marzo 2012

## Find what you need Understand what you Find

Paolo Buono - Information Visualization - 23 marzo 2012

## Simple visualization: Scatterplot

Paolo Buono - Information Visualization - 23 marzo 2012

## The scatterplot

```
Scatterplot(xDim,yDim,cDim,rDim,rMin,rMax)
for each record i 'for each record
do x <- Normalize(i,xDim) 'derive location
y <- Normalize(i,yDim)
r <- Normalize(i,rDim,rMin,rMax) 'radius
MapColor(i,cDim) 'and color then
Circle(x,y,r) 'draw the record as circle
```

Paolo Buono - Information Visualization - 23 marzo 2012

## The Scatterplot

Vehicle Name	Sedan	Sports	SUV	Wagon	Minivan	Pickup	AWD	RWD	Price
Acura 3.5 RL 4dr	1	0	0	0	0	0	0	0	43755
Acura MDX	0	0	1	0	0	0	1	0	36945
Suzuki XL-7 EX	0	0	1	0	0	0	0	0	23699

A simple partial table of the car and truck data. Note that you can think of this as a row-based table (cars and trucks) or a column-based table (car attributes)

Paolo Buono - Information Visualization - 23 marzo 2012

# The Scatterplot

# The Scatterplot

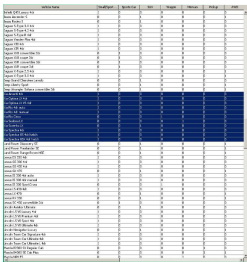

- A scatterplot of horsepower versus city MPG for Toyota vehicles
- The vehicle class is mapped to color

University of Twente  
Faculty of Engineering Technology  
Quality & City Laboratory

# The Scatterplot

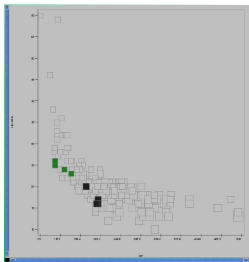

Table and scatterplot of the Kia vehicles.  
Note that here, too, a linear relationship holds

Daan's Daamen – Information Visualization – 23 maart 2015

# The Scatterplot

A scatterplot showing the relationship between speed (km/h) on the x-axis and fuel consumption (l/100km) on the y-axis. The x-axis ranges from 0 to 160 km/h, and the y-axis ranges from 0 to 18 l/100km. The plot contains numerous data points, mostly green and black, with a few red and blue points at higher speeds. The data points show a clear negative correlation, with fuel consumption decreasing as speed increases. The plot is titled 'Scatterplot of all vehicles'.

- Scatterplot of all vehicles
- There is lots to explore here

## Data Types taxonomy (*Shneiderman*)

- 1-D Linear
- 2-D (Map)
- 3-D (World)
- Multi-Dimensional
- Temporal
- Tree
- Network

Piero Ruocco – Information Visualization – 23 marzo 2012

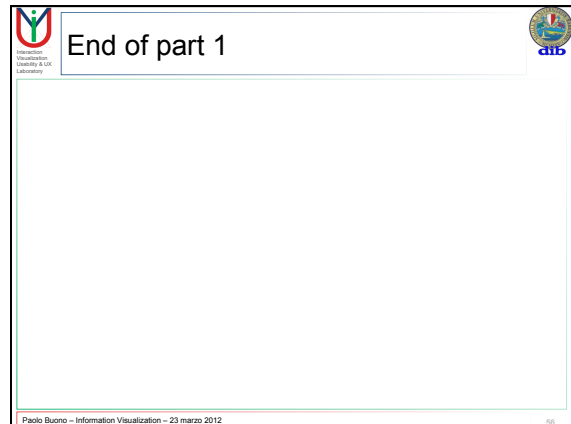

**Information Visualization:**  
**Tasks taxonomy (Shneiderman)**

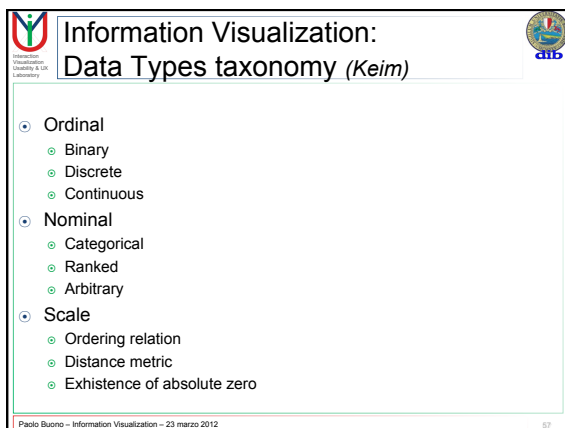

- Overview
- Zoom
- Filter
- Details-on-demand
- Relate
- History
- Extract
- ...?
- Search

Paolo Buono – Information Visualization – 23 marzo 2012

**End of part 1**

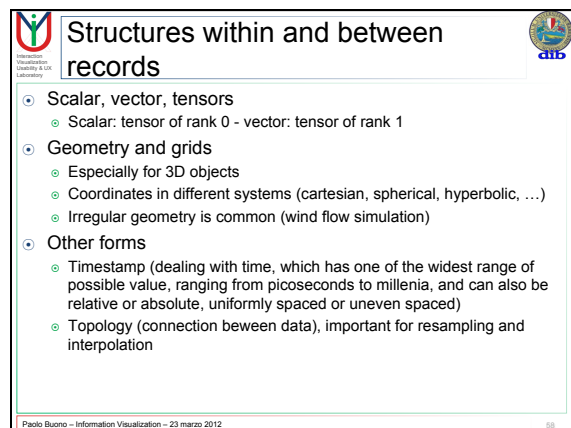

Paolo Buono – Information Visualization – 23 marzo 2012

**Information Visualization:**  
**Data Types taxonomy (Keim)**

- Ordinal
  - Binary
  - Discrete
  - Continuous
- Nominal
  - Categorical
  - Ranked
  - Arbitrary
- Scale
  - Ordering relation
  - Distance metric
  - Existence of absolute zero

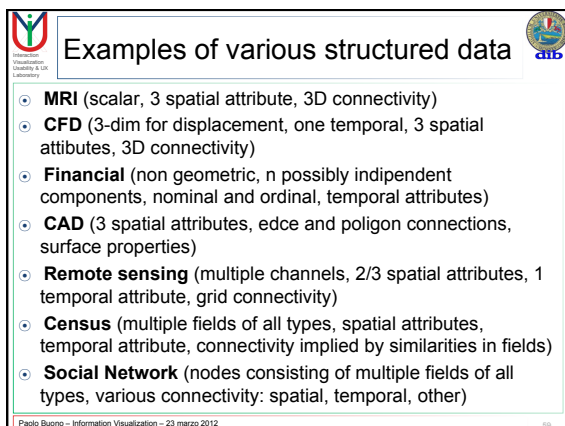

Paolo Buono – Information Visualization – 23 marzo 2012

**Structures within and between records**

- Scalar, vector, tensors
  - Scalar: tensor of rank 0 - vector: tensor of rank 1
- Geometry and grids
  - Especially for 3D objects
  - Coordinates in different systems (cartesian, spherical, hyperbolic, ...)
  - Irregular geometry is common (wind flow simulation)
- Other forms
  - Timestamp (dealing with time, which has one of the widest range of possible value, ranging from picoseconds to millenia, and can also be relative or absolute, uniformly spaced or uneven spaced)
  - Topology (connection between data), important for resampling and interpolation

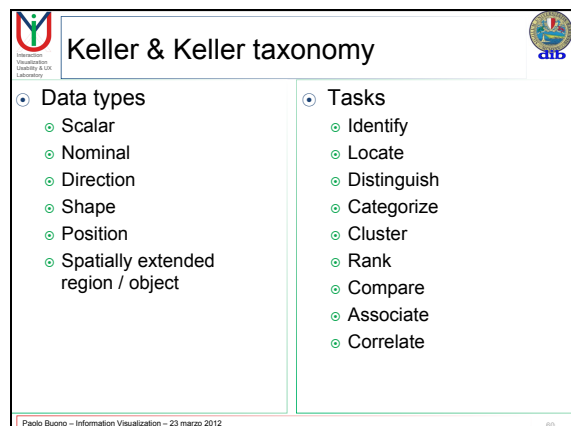

Paolo Buono – Information Visualization – 23 marzo 2012

**Examples of various structured data**

- **MRI** (scalar, 3 spatial attribute, 3D connectivity)
- **CFD** (3-dim for displacement, one temporal, 3 spatial attributes, 3D connectivity)
- **Financial** (non geometric, n possibly independent components, nominal and ordinal, temporal attributes)
- **CAD** (3 spatial attributes, edge and polygon connections, surface properties)
- **Remote sensing** (multiple channels, 2/3 spatial attributes, 1 temporal attribute, grid connectivity)
- **Census** (multiple fields of all types, spatial attributes, temporal attribute, connectivity implied by similarities in fields)
- **Social Network** (nodes consisting of multiple fields of all types, various connectivity: spatial, temporal, other)

Paolo Buono – Information Visualization – 23 marzo 2012

**Keller & Keller taxonomy**

Data types	Tasks
• Scalar	• Identify
• Nominal	• Locate
• Direction	• Distinguish
• Shape	• Categorize
• Position	• Cluster
• Spatially extended region / object	• Rank
	• Compare
	• Associate
	• Correlate

Paolo Buono – Information Visualization – 23 marzo 2012

### Information Visualization: Design Guidelines (Shneiderman)

- Direct manipulation strategies
  - Visual presentation of query components
  - Visual presentation of results
  - Rapid, incremental and reversible actions
  - Selection by pointing (not typing)
  - Immediate and continuous feedback
  - Reduces errors
  - Encourages exploration

Paolo Buono – Information Visualization – 23 marzo 2012

### Information Visualization: Mantra

*Shneiderman*

Paolo Buono – Information Visualization – 23 marzo 2012

### Strategies for Visual Information Reduction

- Difficulties to represent all information in the limited space of a display, and to navigate within the representation at different levels of detail
- Fisheye views (Furnas, 1981 & 1986)
  - "... an example of a more basic strategy for the display of large structures. This basic strategy uses a Degree of Interest (DOI) function which assigns to each point in the structure a number telling how interested the user is in seeing that point, given the current task. A display of any desired size,  $n$ , can then be made by simply showing the  $n$  most interesting points, as indicated by the DOI function."
- DOI of an object is computed with respect to a particular focus  $fp$ 

$$DOI(x | fp=y) = API(x) - D(x,y)$$
- $API(x)$  is the a priori interest of point  $x$
- $D(x,y)$  is the current distance between  $x$  and  $fp$
- Applicazioni: hierarchies, structured text, calendars, ...
- Focus + context (Card et al., CHI '91)
- Information Visualization Seeking Mantra (Shneiderman, 1996)
- [Want to know more? Stasko may help...](#)

Paolo Buono – Information Visualization – 23 marzo 2012

### User Interface Design Goals

- Cognitively comprehensible:  
Consistent, predictable & controllable
- Affectively acceptable:  
Mastery, satisfaction & responsibility
- NOT: Adaptive, autonomous & anthropomorphic

Paolo Buono – Information Visualization – 23 marzo 2012

### Scientific Approach (beyond user friendly)

- Specify users and tasks
- Predict and measure
  - time to learn
  - speed of performance
  - rate of human errors
  - human retention over time
- Assess subjective satisfaction  
(Questionnaire for User Interface Satisfaction)
- Accommodate individual differences
- Consider social, organizational & cultural context

Paolo Buono – Information Visualization – 23 marzo 2012

Paolo Buono – Information Visualization – 23 marzo 2012
68

## Perceptual issues

### Human Perception and Information Processing

Paolo Buono – Information Visualization – 23 marzo 2012
69

## Perception?

- The process by which we interpret the world around us, forming a mental representation of the environment
- Non-isomorphic representation since the brain have to overcome inherent ambiguity in all sensory data
- Visual representation can be misinterpreted

Paolo Buono – Information Visualization – 23 marzo 2012
69

## Two seated figures

N. Yoshigahara

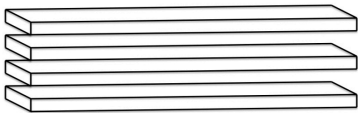

Two seated figures, making sense at a higher, more abstract level, but still disturbing  
On closer inspection, these seats are not realizable

Paolo Buono – Information Visualization – 23 marzo 2012
70

## Four ≠ three

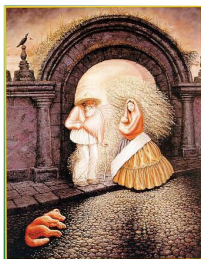

This object would have a problem being built (there are four boards on the left and three on the right)

Paolo Buono – Information Visualization – 23 marzo 2012
71

## Two people making a face

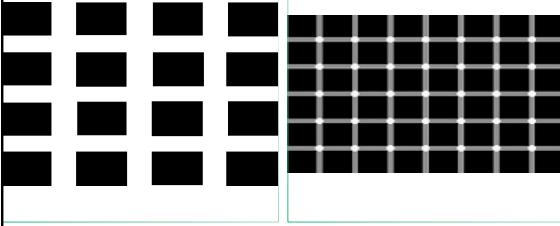

A more complex illusion:  
There are two people drawn as part of the face

Paolo Buono – Information Visualization – 23 marzo 2012
72

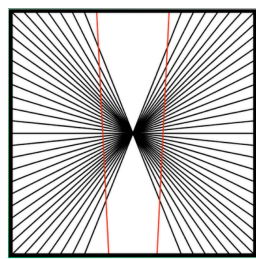

**Grid illusion**

The Hermann grid illusion: (left) illusory black squares appear over the complete image as you gaze at it; (right) similar to (left) but even more dynamic and engaging

Paolo Buono - Information Visualization - 23 marzo 2012

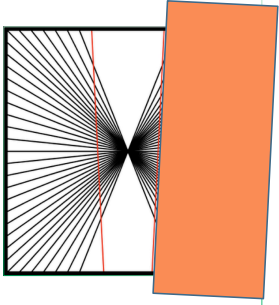

**Classic straight lines example**

**The Hering illusion:**  
red lines are straight

Paolo Buono - Information Visualization - 23 marzo 2012

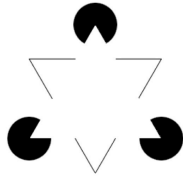

**No trick, lines are straight**

**The Hering illusion:**  
red lines are straight

Paolo Buono - Information Visualization - 23 marzo 2012

**The Kanizsa illusion**

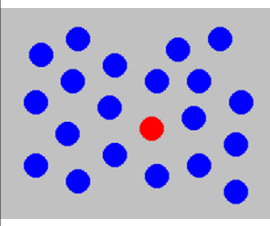

A triangle seems to pop out of the image even though no such triangle is drawn

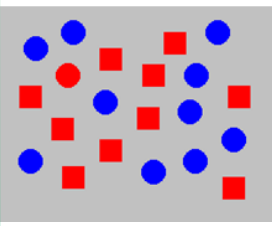

Paolo Buono - Information Visualization - 23 marzo 2012

**Preattention**

**Works**

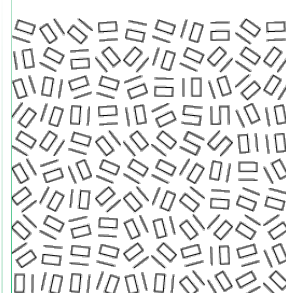

**Do not work**

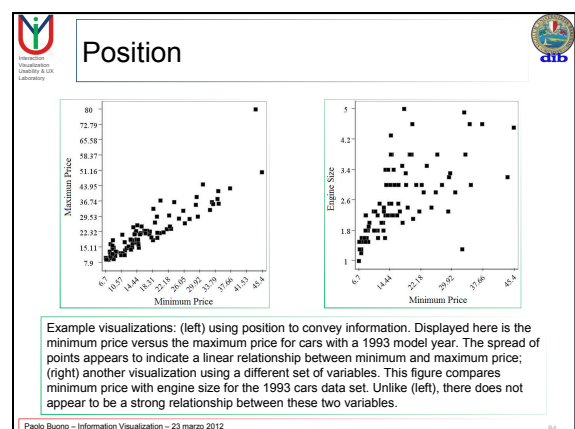

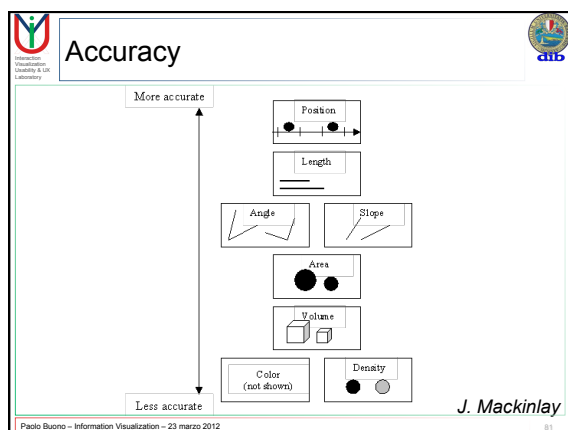

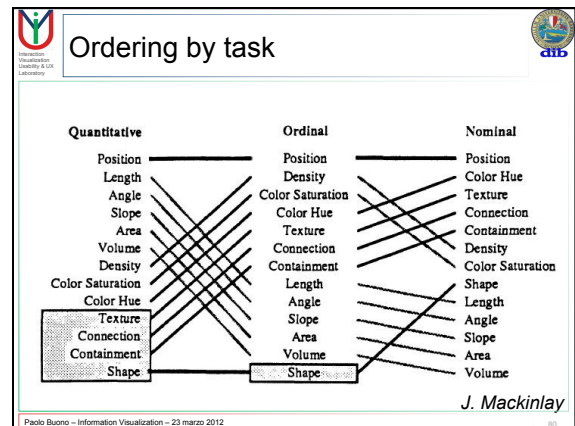

Paolo Buono - Information Visualization - 23 marzo 2012

**Attention processing**

- Preattentive
- Attentive
- Postattentive

Paolo Buono - Information Visualization - 23 marzo 2012

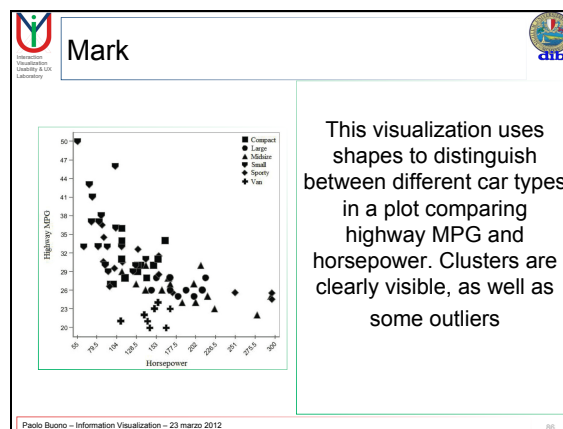

### Mark

Several examples of different marks or glyphs that can be used.

Paolo Buono - Information Visualization - 23 marzo 2012

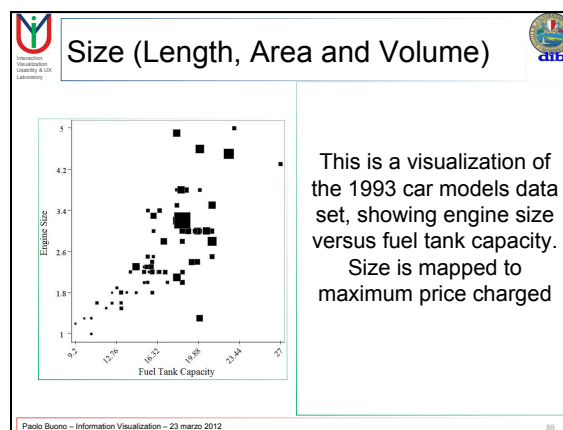

### Size (Length, Area and Volume)

Example sizes to encode data.

Paolo Buono - Information Visualization - 23 marzo 2012

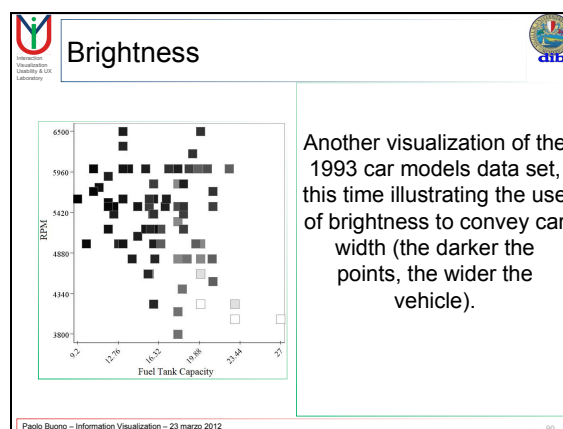

### Brightness

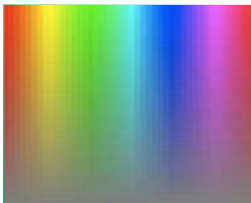

Brightness scale for mapping values to the display.

Paolo Buono - Information Visualization - 23 marzo 2012

**Color**

Microsoft hue/saturation color selector

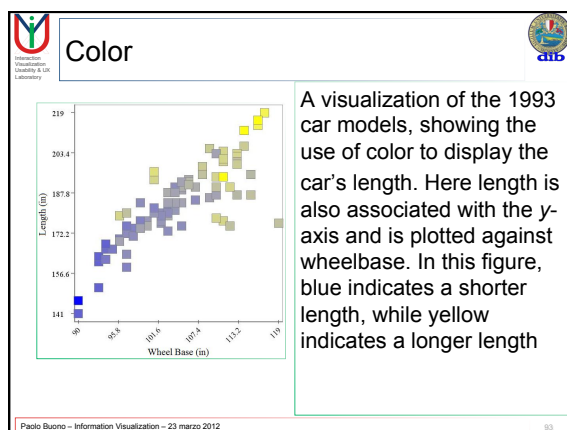

Paolo Buono – Information Visualization – 23 marzo 2012

**Color**

Example colormap that can be used to encode a data variable.

Paolo Buono – Information Visualization – 23 marzo 2012

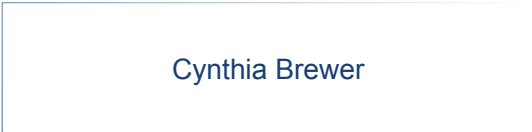

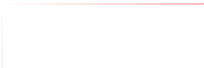

**Color**

Some common colormaps:

-  standard linear gray scale
-  rainbow
-  heated
-  blue to cyan
-  blue to yellow

Paolo Buono – Information Visualization – 23 marzo 2012

**Cynthia Brewer**

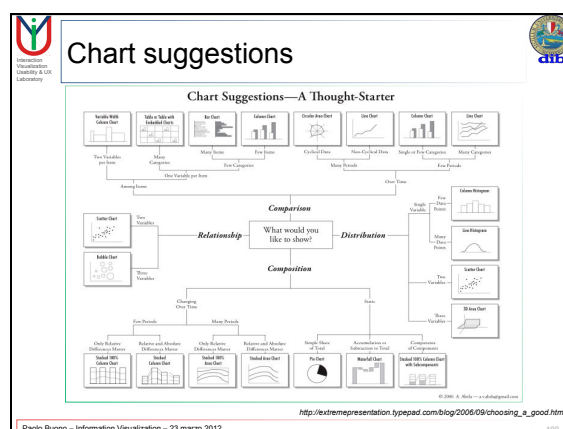

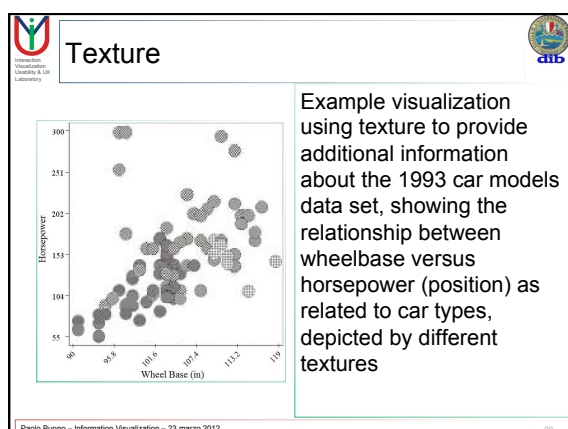

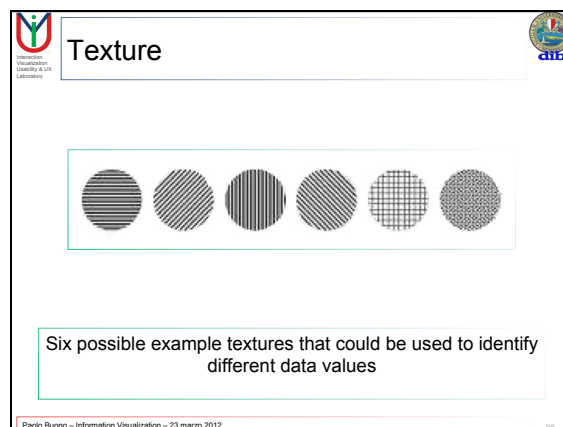

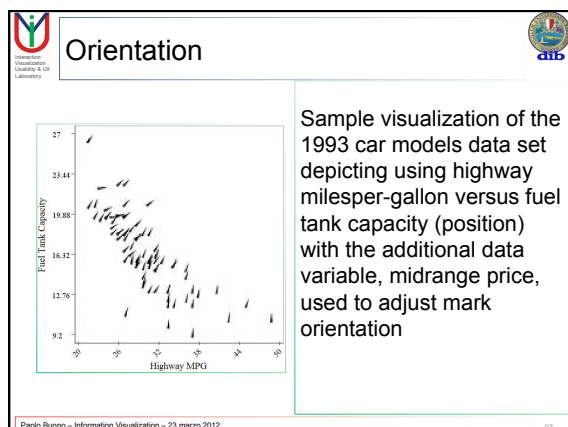

UNIVERSITÀ DEGLI STUDI DI BARI ALDO MORO

**Orientation**

Example orientations of a representation graphic, where the lowest value maps to the mark pointing upward and increasing values rotate the mark in a clockwise rotation

Paolo Buono – Information Visualization – 23 marzo 2012

**Spectrum of 3-D Visualizations**

- Immersive Virtual Environment with head-mounted stereo display and head tracking
- Desktop 3-D for 3-D worlds
  - medical, architectural, scientific visualizations
- Desktop 3-D for artificial worlds
  - Bookhouse, file-cabinets, shopping malls
- Desktop 3-D for information visualization
  - cone/cam trees, perspective wall, web-book
  - SGI directories, Visible Decisions, Media Lab landscapes
  - XGobi scatterplots, Themescape, Visage
- Chartjunk 3-D: barcharts, piecharts, histograms

Paolo Buono – Information Visualization – 23 marzo 2012

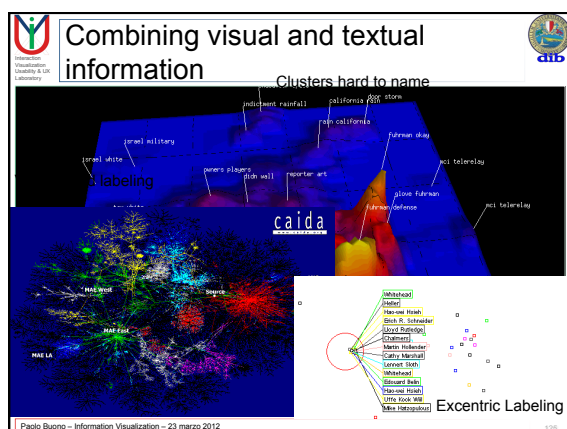

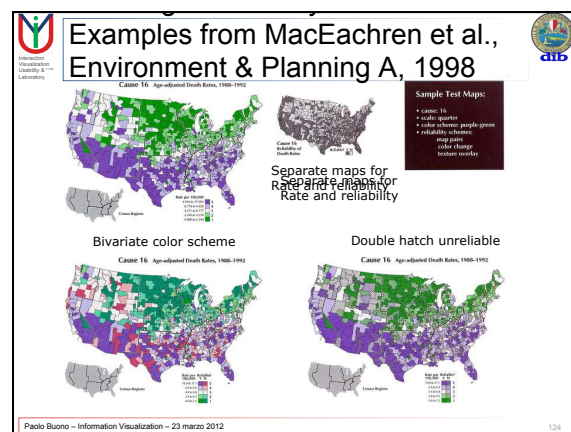

### Challenges

- Dealing with large volume of data
  - Also problem of missing data, uncertainty
- Combining visual with textual representations
- Collaborative exploration
  - Environments for publishing results, sharing knowledge
  - Large shared displays
- Integrating with data mining
- Specialized toolkits and development tools
- Addressing Universal Usability
- Evaluation

Paolo Buono - Information Visualization - 23 marzo 2012

### Challenges

- Dealing with large volume of data
  - Missing data, uncertainty
- Combining visual with textual representations
- Collaborative exploration
  - Environments for gathering data, publishing results, sharing knowledge
  - Large shared displays
- Integrating with data mining
- Specialized toolkits and development tools
- Addressing Universal Usability
- Evaluation

## Collaboration - Wall-Size Displays

Paolo Buono - Information Visualization - 23 marzo 2012

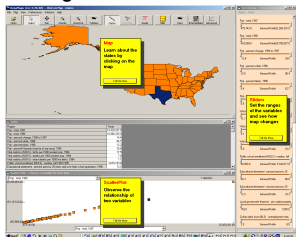

## Challenges

- Dealing with large volume of data
  - Missing data, uncertainty
- Combining visual with textual representations
- Collaborative exploration
  - Environments for publishing results, sharing knowledge
  - Large shared displays
- Integrating with data mining
- Specialized toolkits and development tools
- Addressing Universal Usability
- Effective evaluation

Paolo Buono - Information Visualization - 23 marzo 2012

## Addressing Universal Usability

- Section 508 / users with disabilities
- Helping new users get started

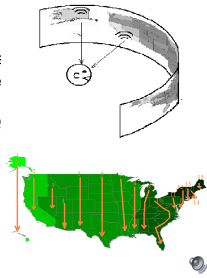

- Dealing with variety of devices and network speed

Paolo Buono - Information Visualization - 23 marzo 2012

## AudioMap: Sonification

- Motivation:** improve vision-impaired users' access to geo-referenced statistical data
- Approach:** interactive sonification
  - Tie spatial sound to areas to create a virtual
  - Data-to-sound mapping: Piano pitch -> value  
Can be followed by short string pitch -> vertical
  - Interactions for auditory information seeking
    - Gist (overview): spatial sweeping
    - Navigation: state-by-state exploration
    - Details-on-demand: name & value spoken on request
- Pilot user study (9 sighted subjects)
  - Users can recognize some geographical patterns
  - Users preferred spatial audio map over table

Paolo Buono - Information Visualization - 23 marzo 2012

## Challenges

- Dealing with large volume of data
  - Missing data, uncertainty
- Combining visual with textual representations
- Collaborative exploration
  - Environments for publishing results, sharing knowledge
  - Large shared displays
- Integrating with data mining
- Specialized toolkits and development tools
- Addressing Universal Usability
- Effective evaluation

Paolo Buono - Information Visualization - 23 marzo 2012

## Opportunities

- Improve traditional user testing
  - More complex tasks
  - Benchmark datasets AND tasks
  - Longitudinal studies
- Case studies and records of success stories
  - Looking at data from different perspectives, over a long time
  - Answering questions you didn't know you had
  - Discovery and the benefits of awareness
